CareLens Cymru

December 2022 publication-month manager learning report

Independent manager learning | source: CIW / Welsh Government

Publication period: 2022-12-01 to 2022-12-31
Snapshot: 2026-11-01
Fixed all-data period cohort; latest archived reports only.

The fixed cohort contains 1 homes across 1 authorities; 1 latest archived reports provide 10 source PDF pages.

1 reports have official CIW summaries and 0 have explicitly labelled theme extracts. 0 cohort homes have no archived report.

1 homes have at least one published theme rating and 0 have none. The four theme distributions retain missing values and use the full cohort denominator.

Published tables contain 0 specific rows: 0 Priority action and 0 Area for improvement. 0 rows are Achieved; 0 have unknown status.

0 specific action rows have no topic assignment and remain included in the whole-cohort row totals; topic charts must not be treated as a complete action inventory.

All 36 extracted finding rows and 6 sections inform the evidence map. Positive and Improvement wording counts are separate overlapping search-label cohorts.

One report only: this is a sourced learning case, not a prevalence estimate or a comparison between homes.

How to use this report

Read the cohort and limitations first. Use the topic evidence to recognise positive practice and prevent weaknesses; test suitability in your own home. Do not treat search labels or historical action rows as present-day judgements.

Open the complete companion HTML source register and all official summaries

Coverage and exact published ratings

The rating denominator is all homes in this fixed cohort. Not published is explicit. Snapshot rating dates are not guaranteed to align with report publication dates.

Theme	Published rating	Homes	Denominator
Well-being	Good	1	1/1
Care and Support	Good	1	1/1
Environment	Excellent	1	1/1
Leadership and Management	Excellent	1	1/1

Action-table status

Published status	Specific rows
No rows	0

1 official summaries; 0 labelled theme extracts. 36 finding rows and 6 sections were considered.

Evidence map: mentions, not deficiencies

All counts are distinct report-bearing homes / 1. Positive and Improvement wording are automated search-label sets. Action columns count homes with matching non-none published rows; historical and achieved rows remain included. Sets overlap.

Topic	Mention	Positive	Improvement wording	Action	Priority
Medicines management	0	0	0	0	0
Safeguarding & incident learning	1	1	0	0	0
Personal plans & risk assessment	1	0	0	0	0
Staffing & recruitment	1	1	1	0	0
Training & supervision	1	0	0	0	0
Leadership & quality assurance	1	1	0	0	0
Rights, choice & independence	1	0	0	0	0
Nutrition & hydration	1	0	0	0	0
Infection prevention	0	0	0	0	0
Environment & fire safety	1	0	1	0	0
Welsh language & culture	1	0	0	0	0
Meaningful activity & community	1	1	0	0	0

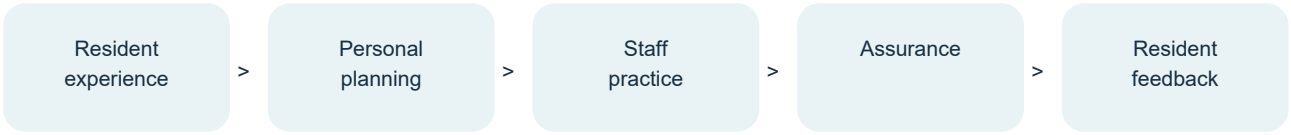

Interpret the patterns

Environment & fire safety: 0 reports have matching table rows; 1 have Improvement wording and 0 have Positive wording. Use the source context and local testing, not a league table or an assumption of widespread failure.

Staffing & recruitment: 0 reports have matching table rows; 1 have Improvement wording and 1 have Positive wording. Use the source context and local testing, not a league table or an assumption of widespread failure.

Meaningful activity & community: 0 reports have matching table rows; 0 have Improvement wording and 1 have Positive wording. Use the source context and local testing, not a league table or an assumption of widespread failure.

A practical implementation sequence

Illustrative assistant learning workflow; not an official CIW framework.

Week 1 — understand and test

Ask residents what matters. Read representative positive and issue evidence with the relevant lead. Sample current records and observe practice. Identify applicable local gaps, separating historical/achieved source rows from current local concerns.

By day 30 — trial and verify

Trial a small agreed change with a named owner and review date. Define success using the listed assurance records, direct observation and resident feedback. Record exceptions and unintended consequences; adapt good practice rather than simply copy it.

By day 90 — sustain and listen

Repeat the same checks to verify the control remains effective. Ask residents and staff whether experience improved. Retain effective changes, revise ineffective ones and bring persistent local gaps to oversight.

Success is not a completed checklist alone. Triangulate records, observed staff practice and people's experience. These are assistant-suggested learning prompts, not new legal duties or clinical instructions.

Single-report learning case

Forestry House

Official CIW summary

Forestry House provides care and support for six young people between the age of five and nineteen. Young people are supported to achieve positive well-being outcomes and care staff are motivated and inclusive in developing strategies to increase young people’s engagement.

Since the last inspection the service provider has focused on the suitability of their service for young people and sustaining and improving the areas of development identified in 2021. The overall governance and management of the service is a good standard and provides assurances it is committed to continuous improvement and development.

Work is required to continue improving the environment, with particular attention to bedrooms and bathroom facilities and the manager advised there is a development plan in place.

Three evidence-linked controls to start with

These are practical starting points from this one source, not a ranked assessment. All twelve topic controls and the complete evidence map remain available in the companion HTML.

Environment & fire safety

Reports / 1: mentions 1; Positive wording 0; Improvement wording 1; matching action rows 0; Priority category 0. Overlapping search-label sets.

Review fire and premises safety, servicing, accessibility and environmental risks; verify outstanding maintenance actions and person-specific evacuation arrangements.

Local test: Walk the premises and trace sampled safety or maintenance exceptions to verification.
Outcome to verify: Identified hazards receive appropriate follow-up and checks reflect actual conditions.

Suggested owner: Estates lead / manager
Evidence of success: Safety checks, servicing, maintenance log and evacuation plans; cross-check against observed practice and resident feedback.

Weakness prevention: direct improvement wording

> However, maintenance works are not always completed in a suitable time frame or finished to a good standard.

Forestry House | PDF page 6 · Archived page · CIW source

Staffing & recruitment

Reports / 1: mentions 1; Positive wording 1; Improvement wording 1; matching action rows 0; Priority category 0. Overlapping search-label sets.

Review staffing against actual dependency and safe recruitment checks. Examine continuity, induction and the impact of vacancies or agency use.

Local test: Compare recent rotas and induction checks with actual support needs and continuity.
Outcome to verify: The agreed staffing arrangements work in observed practice; identified gaps receive follow-up.

Suggested owner: Registered manager / HR
Evidence of success: Dependency reviews, rota analysis and recruitment checks; cross-check against observed practice and resident feedback.

Positive practice to adapt

> Care staff spoke positively about the Responsible Individual and Regional Manager, and the encouraging and positive culture which is demonstrated by all who work at the service Young people can be assured they are cared for by care staff who have been subject to safe recruitment checks.

Forestry House | PDF page 7 · Archived page · CIW source

Weakness prevention: direct improvement wording

> New care staff complete a corporate inhouse induction, however many care staff provided feedback to CIW stating the content is not always appropriate or purposeful for those working with care experienced young people.

Forestry House | PDF page 7 · Archived page · CIW source

Meaningful activity & community

Reports / 1: mentions 1; Positive wording 1; Improvement wording 0; matching action rows 0; Priority category 0. Overlapping search-label sets.

Review opportunities for personally meaningful activity, relationships and community participation, using resident outcomes rather than activity counts alone.

Local test: Discuss meaningful goals with residents and compare participation records with experience.
Outcome to verify: People describe opportunities that matter to them and feedback shapes future support.

Suggested owner: Well-being lead
Evidence of success: Resident goals, participation records and feedback; cross-check against observed practice and resident feedback.

Positive practice to adapt

> Forestry House supports young people with a full-time manager and a full complement of care staff, providing consistency of care and supporting positive relationships.

Source register: navigation, not a data dump

All 1 cohort records, including all 1 archived report summaries, are retained in the companion standalone HTML and report-library.json. The HTML register gives publication, issue and visit dates, exact summary kind, summary pages and individual source links. This PDF retains representative source-page links rather than a hundreds-page summary appendix.

Open full source register and every summary in the companion HTML

CIW public source

Archived report

Method, attribution and limitations

This is a fixed all-data period cohort, not a dashboard-filter cohort. Only each service's latest archived report is included; this is not the complete historical inspection series or a trend in care quality. Early empty periods must not be interpreted as an absence of historical inspections: earlier reports are outside this latest-only archive.

Monthly membership uses reportPublishedActualDate, not the inspection visit or report issue date. Visit start/end, issue and publication are distinct. Empty months mean no latest archived report was published in that month, not that CIW did no inspections.

Ratings are the exact four published directory-snapshot theme values. Their effective dates are not independently auditable and cannot be assumed to match the historical publication month. Missing ratings and missing reports are not evidence of poor care. No overall quality score is calculated.

Positive wording and Improvement wording are automated search labels, not independent CIW findings. Topic counts mean reports mentioning a topic, not failures; topics and evidence sets overlap and must not be added together.

Published action-table rows can be historical or Achieved. New and Reviewed describe status words published in the source, not validation today. Missing status means unknown, not unresolved. Category counts are not counts of current failures or confirmed enforcement notices.

Excerpts and official summaries retain extracted wording and PDF page provenance. Layout changes and damaged characters can occur; the archived PDF is authoritative. Representative examples are not an exhaustive account or a prevalence estimate.

Public latest-report URLs can change after this snapshot. Use the linked local archived PDF to verify the captured evidence; the external source link establishes its CIW origin.

Management controls and the illustrative learning workflow are assistant-suggested local learning prompts, not CIW requirements, legal advice, clinical advice or an accreditation assessment. Validate applicability with appropriate local leads.

CareLens Cymru is independent and not an official CIW product. Source: Care Inspectorate Wales / Welsh Government, Crown copyright in each report's stated year; reuse under the Open Government Licence, excluding logos. 979 archived reports contain explicit licence notices. The Haven has no extracted notice; the general CIW copyright page provides Crown-material reuse permission. Source links and attribution are retained.

Method: deterministic aggregation of the full JSON findings, theme sections and specific action rows. Topic examples are conservatively selected exact extracted wording, preferring readable short passages from distinct homes. Positive examples exclude negative/qualification vocabulary; issue examples require direct negative or required-improvement wording. Generic enforcement boilerplate and contact-bearing/header excerpts are excluded. These selection rules change displayed examples, not the original search-label counts.
