CareLens Cymru

Inspection evidence. Better care.

June 2021 publication-month manager learning report

Independent manager learning | source: CIW / Welsh Government

Publication period: 2021-06-01 to 2021-06-30
Snapshot: 2026-11-01
Fixed all-data period cohort; latest archived reports only.

The fixed cohort contains 1 homes across 1 authorities; 1 latest archived reports provide 10 source PDF pages.

1 reports have official CIW summaries and 0 have explicitly labelled theme extracts. 0 cohort homes have no archived report.

0 homes have at least one published theme rating and 1 have none. The four theme distributions retain missing values and use the full cohort denominator.

Published tables contain 0 specific rows: 0 Priority action and 0 Area for improvement. 0 rows are Achieved; 0 have unknown status.

0 specific action rows have no topic assignment and remain included in the whole-cohort row totals; topic charts must not be treated as a complete action inventory.

All 44 extracted finding rows and 5 sections inform the evidence map. Positive and Improvement wording counts are separate overlapping search-label cohorts.

One report only: this is a sourced learning case, not a prevalence estimate or a comparison between homes.

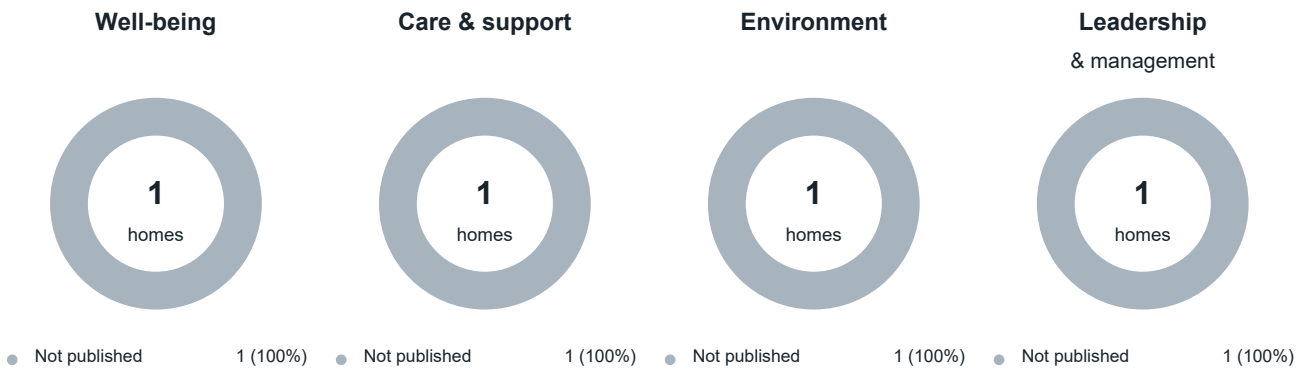

How to use this report

Read the cohort and limitations first. Use the topic evidence to recognise positive practice and prevent weaknesses; test suitability in your own home. Do not treat search labels or historical action rows as present-day judgements.

Open the complete companion HTML source register and all official summaries

Coverage and exact published ratings

The rating denominator is all homes in this fixed cohort. Not published is explicit. Snapshot rating dates are not guaranteed to align with report publication dates.

Theme	Published rating	Homes	Denominator
Well-being	Not published	1	1/1
Care and Support	Not published	1	1/1
Environment	Not published	1	1/1
Leadership and Management	Not published	1	1/1

Action-table status

Published status	Specific rows
No rows	0

1 official summaries; 0 labelled theme extracts. 44 finding rows and 5 sections were considered.

Evidence map: mentions, not deficiencies

All counts are distinct report-bearing homes / 1. Positive and Improvement wording are automated search-label sets. Action columns count homes with matching non-none published rows; historical and achieved rows remain included. Sets overlap.

Topic	Mention	Positive	Improvement wording	Action	Priority
Medicines management	0	0	0	0	0
Safeguarding & incident learning	1	0	1	0	0
Personal plans & risk assessment	1	0	0	0	0
Staffing & recruitment	1	0	1	0	0
Training & supervision	1	0	1	0	0
Leadership & quality assurance	1	0	1	0	0
Rights, choice & independence	1	0	0	0	0
Nutrition & hydration	0	0	0	0	0
Infection prevention	1	0	0	0	0
Environment & fire safety	1	0	0	0	0
Welsh language & culture	1	0	0	0	0
Meaningful activity & community	1	0	0	0	0

Distinct reports mentioning each topic

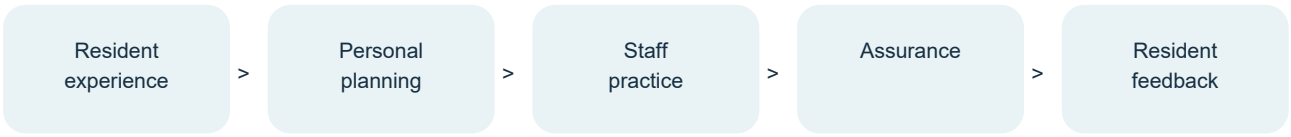

Interpret the patterns

Leadership & quality assurance: 0 reports have matching table rows; 1 have Improvement wording and 0 have Positive wording. Use the source context and local testing, not a league table or an assumption of widespread failure.

Safeguarding & incident learning: 0 reports have matching table rows; 1 have Improvement wording and 0 have Positive wording. Use the source context and local testing, not a league table or an assumption of widespread failure.

Staffing & recruitment: 0 reports have matching table rows; 1 have Improvement wording and 0 have Positive wording. Use the source context and local testing, not a league table or an assumption of widespread failure.

A practical implementation sequence

Illustrative assistant learning workflow; not an official CIW framework.

Week 1 — understand and test

Ask residents what matters. Read representative positive and issue evidence with the relevant lead. Sample current records and observe practice. Identify applicable local gaps, separating historical/achieved source rows from current local concerns.

By day 30 — trial and verify

Trial a small agreed change with a named owner and review date. Define success using the listed assurance records, direct observation and resident feedback. Record exceptions and unintended consequences; adapt good practice rather than simply copy it.

By day 90 — sustain and listen

Repeat the same checks to verify the control remains effective. Ask residents and staff whether experience improved. Retain effective changes, revise ineffective ones and bring persistent local gaps to oversight.

Success is not a completed checklist alone. Triangulate records, observed staff practice and people's experience. These are assistant-suggested learning prompts, not new legal duties or clinical instructions.

Single-report learning case

Llanthewy House

Official CIW summary

The individual outcomes of people living at the service are generally met. The ethos of the service promotes a person centred approach to their care and support. We were told individuals daily lives have been adversely affected by the pandemic. The staff team is small and stable which provides consistency and familiarity to residents. We found systems to support the smooth running of the service are ineffective. Arrangements to protect individuals from abuse and harm need strengthening. Staff have not received the necessary core training to update their skills and knowledge. The responsible individual (RI), is not carrying out their regulatory duties in regards to overseeing the management of the service and providing assurance it is safe, well run and complies with regulations. The RI has failed to conduct any formal visits to the service since its registration in January 2019. Quality of care reviews have not taken place as required by the regulations. Due to the significance of our findings, we identified a number of areas of improvements linked to the leadership and

management of the service.

Read the original CIW report

Three evidence-linked controls to start with

These are practical starting points from this one source, not a ranked assessment. All twelve topic controls and the complete evidence map remain available in the companion HTML.

Leadership & quality assurance

Reports / 1: mentions 1; Positive wording 0; Improvement wording 1; matching action rows 0; Priority category 0. Overlapping search-label sets.

Review responsible-individual oversight and quality reviews. Track audit actions to closure and show how resident and relative feedback changes the service.

Local test: Trace an audit exception and resident feedback through ownership, action and recheck.
Outcome to verify: Oversight detects gaps and verifies improvements with records, observation and resident feedback.

Suggested owner: Responsible individual / manager
Evidence of success: RI visit records, quality reports, feedback and closed action log; cross-check against observed practice and resident feedback.

Weakness prevention: direct improvement wording

> Staff must receive core training appropriate to the work they Regulation 36(2)(d) perform The RI must provide a six monthly quality of care and support Regulation 66 report The area(s) identified above require improvement but we have not issued a priority action notice on this occasion.

Llanthewy House | PDF page 9 · Archived page · CIW source

Safeguarding & incident learning

Reports / 1: mentions 1; Positive wording 0; Improvement wording 1; matching action rows 0; Priority category 0. Overlapping search-label sets.

Review safeguarding escalation, incident reporting and CIW notifications. Check that staff understand local procedures and that learning reaches the team.

Local test: Walk through a local escalation scenario and trace a recent incident review.
Outcome to verify: Staff explain escalation confidently and can show how incident learning changed practice.

Suggested owner: Registered manager
Evidence of success: Escalation log, training records, incident reviews and notifications; cross-check against observed practice and resident feedback.

Weakness prevention: direct improvement wording

> We found the relevant agencies have not always been informed of significant incidents and events.

Llanthewy House | PDF page 4 · Archived page · CIW source

Staffing & recruitment

Reports / 1: mentions 1; Positive wording 0; Improvement wording 1; matching action rows 0; Priority category 0. Overlapping search-label sets.

Review staffing against actual dependency and safe recruitment checks. Examine continuity, induction and the impact of vacancies or agency use.

Local test: Compare recent rotas and induction checks with actual support needs and continuity.
Outcome to verify: The agreed staffing arrangements work in observed practice; identified gaps receive follow-up.

Suggested owner: Registered manager / HR
Evidence of success: Dependency reviews, rota analysis and recruitment checks; cross-check against observed practice and resident feedback.

Weakness prevention: direct improvement wording

> Recruitment practices were not considered during the visit, there have been no new staff members employed at the service.

Source register: navigation, not a data dump

All 1 cohort records, including all 1 archived report summaries, are retained in the companion standalone HTML and report-library.json. The HTML register gives publication, issue and visit dates, exact summary kind, summary pages and individual source links. This PDF retains representative source-page links rather than a hundreds-page summary appendix.

CIW public source

Archived report

Method, attribution and limitations

This is a fixed all-data period cohort, not a dashboard-filter cohort. Only each service's latest archived report is included; this is not the complete historical inspection series or a trend in care quality. Early empty periods must not be interpreted as an absence of historical inspections: earlier reports are outside this latest-only archive.

Monthly membership uses reportPublishedActualDate, not the inspection visit or report issue date. Visit start/end, issue and publication are distinct. Empty months mean no latest archived report was published in that month, not that CIW did no inspections.

Ratings are the exact four published directory-snapshot theme values. Their effective dates are not independently auditable and cannot be assumed to match the historical publication month. Missing ratings and missing reports are not evidence of poor care. No overall quality score is calculated.

Positive wording and Improvement wording are automated search labels, not independent CIW findings. Topic counts mean reports mentioning a topic, not failures; topics and evidence sets overlap and must not be added together.

Published action-table rows can be historical or Achieved. New and Reviewed describe status words published in the source, not validation today. Missing status means unknown, not unresolved. Category counts are not counts of current failures or confirmed enforcement notices.

Excerpts and official summaries retain extracted wording and PDF page provenance. Layout changes and damaged characters can occur; the archived PDF is authoritative. Representative examples are not an exhaustive account or a prevalence estimate.

Public latest-report URLs can change after this snapshot. Use the linked local archived PDF to verify the captured evidence; the external source link establishes its CIW origin.

Management controls and the illustrative learning workflow are assistant-suggested local learning prompts, not CIW requirements, legal advice, clinical advice or an accreditation assessment. Validate applicability with appropriate local leads.

CareLens Cymru is independent and not an official CIW product. Source: Care Inspectorate Wales / Welsh Government, Crown copyright in each report's stated year; reuse under the Open Government Licence, excluding logos. 979 archived reports contain explicit licence notices. The Haven has no extracted notice; the general CIW copyright page provides Crown-material reuse permission. Source links and attribution are retained.

Method: deterministic aggregation of the full JSON findings, theme sections and specific action rows. Topic examples are conservatively selected exact extracted wording, preferring readable short passages from distinct homes. Positive examples exclude negative/qualification vocabulary; issue examples require direct negative or required-improvement wording. Generic enforcement boilerplate and contact-bearing/header excerpts are excluded. These selection rules change displayed examples, not the original search-label counts.
